Simplifying Lower Extremity and Hip Procedures

The **Orthotrax III Orthopaedic Traction Frame** combines flexibility, simplicity and reliability, enabling surgeons to work with the utmost precision and efficiency during diagnostic and surgical procedures.

Our innovative design features carbon fibre leg spars that are lightweight and easy to set up. They are positioned in a unique oblique arrangement to enhance radiolucency and significantly improve diagnostic imaging outcomes for surgeons. Hipac offers customisable designs, allowing any surgeon to position patients of all sizes into a variety of positions.

By minimising the amount of manual handling required, the Orthotrax III Orthopaedic Traction Frame allows surgeons to focus entirely on their patients.

Keep the Focus on the Patient

The quick and easy application of traction allows clinical staff to remain focused on the patient.

Once the patient is transferred onto the table, removable lightweight leg sections allow the patient to remain safely in-situ without the need for manual sliding or repositioning.

Multi-Position Compatibility

The traction frame is designed to suit a variety of patient positions and procedures. Leg spars can be locked in at any angle, and the traction assembly is adjustable to a variety of patients. The traction frame can be used in conjunction with stirrups and other leg positioners for the unaffected leg.

Durable and Lightweight

The lightweight carbon fibre and aluminium construction of this frame ensures maximum durability and strength, while still being able to support up to 180kg of patient weight.

Quick and Easy Setup

General purpose tables can be transitioned into an orthopaedic table quickly and efficiently by one person, due to its lightweight carbon fibre material and simple set up design.

Space Saving Storage Trolley

The heavy lifting is done by the trolley, reducing strain on staff and increasing productivity. The ergonomic soft-close drawers allow easy storage and rapid access to clamps and other key components.

Compatible with the Hipac range of Skytron Tables

For the ultimate patient positioning set up, pair the Orthotrax III Orthopaedic Traction Frame with our world-class range of operating tables.

The Hipac range of operating tables offer the flexibility surgeons need to conduct procedures effectively. With options like top slide or rotation for efficient imaging and easy surgeon access, there's no better patient positioning partner for the Orthotrax III Orthopaedic Traction Frame.

Education and Training

At Hipac, we prioritise staff training as an essential part of our Customer Service philosophy. Ensuring your staff can competently use our products will maximise the benefit of our solutions and create better patient outcomes. To achieve this Hipac will collaborate with your team to develop a comprehensive and effective training program.

Creating a healthier tomorrow

Operating at the forefront of healthcare, we strive to redefine what's possible. We provide superior products, design expertise and total solutions to help create environments where nothing stands in the way of patient care.
